### Location

Bradenton, FL

### Job Description

The SQL Server Database Engineer is responsible for designing and implementing databases, ETL routines, cubes and reports for new clients, in addition to providing support and enhancements to existing client solutions. The position involves working on multiple concurrent deadline-driven projects.

The SQL Server Database Engineer will work closely with Project Managers, Business Analysts, Quality Assurance Engineers and Management during all phases of the Software Development Life Cycle, and will ensure that internal and client deadlines are met and output is of the highest quality.

### Responsibilities

- Design and build normalized and denormalized database solutions using retail industry best practices for data warehousing for specific client requirements. This will involve Microsoft SQL Server Database programming (stored procedures and database design)
- Design and build ETL routines using SSIS
- Create exception reporting
- Build and maintain cubes (internal and client-facing)
- Create and maintain reports using SQL Server Reporting Services and MDX
- Optimize database schemas, queries, cubes and reports
- Implement complex business logic requirements
- Data analysis to verify solutions are correct
- Database partitioning, archiving and purging
- Implement new technology, plug-ins and APIs

### Requirements

- Minimum of 5 years' experience as a developer building and supporting business intelligence / data warehousing reporting solutions using Microsoft SQL, SSIS, SSRS, SSAS
- Experience building/optimizing cubes and programming OLAP with MDX and SQL queries and experience with Analysis Services (SSAS) and Reporting Services (SSRS) including database development, deployment, configuration, security and troubleshooting
- Knowledge of SQL Server 2016 would be an advantage
- Strong proficiency with core Microsoft Office Tools (Outlook, Power Point, Excel, and Word)
- Strong understanding of retail data and experience building retail reporting solutions
